### PRODUCT DATA SHEET

## Aware Messenger™

Catalog #:	98184	50 count
Description:	A device for the collection, stabilization, and transport of oral fluid specimens to be used for the detection of specific antibodies or analytes. Aware Messenger™ specimens may be tested with conventional laboratory-based immunoassays (e.g. ELISA) enabling high-throughput batch testing, automation, quantitative results, and lower costs.	
Applications:	Aware Messenger™ generates a stabilized, high-quality and immunoassay-friendly oral fluid specimen that is simply collected and requires no further processing (e.g. centrifugation). Aware Messenger™ specimens are rich in various analytes representative of those found in blood. Applications include detection of infectious disease antibodies and antigens, cancer markers, nucleic acids, illicit drugs, and hormones.	
Recommended Use:	Oral fluid specimen collection and transport	
Physical Appearance:	Buffer-filled test tube and collection swab	
Minimum Shelf Life*:	18 months upon receipt when stored as specified	
Safety:	No special hazard; see MSDS	
Storage:	2°- 30° C	
Shipping:	Ambient	

FOR RESEARCH USE ONLY. NOT FOR DIAGNOSTIC PURPOSES.

\*This shelf life is the period for which the product is warranted by Calypte against degradation when stored unopened according to conditions specified in the product labeling. Calypte cannot know all applications for which these materials may be used and cannot make any warranty regarding usefulness in any particular application or stability within all applications. Customers are responsible for validating material for their particular application and for stability in that application. Please note that improper storage or contamination after opening may adversely affect material storage.
